

AES Indiana filed a [regulatory rate review](#) with the Indiana Utility Regulatory Commission (IURC) on June 3, 2025

AES Indiana is committed to continuing to deliver the reliable service to our more than 530,000 customers expect while investing in the growth of Central Indiana and the future of energy for our communities.

If approved by the IURC, a residential customer using 1,000 kWh per month will see an estimated 13.5% bill increase in two phases: up to 7.5% in Q2 of 2026 and up to 6% in January 2027. In addition to the proposed new rates, we anticipate a 6.3% bill increase in 2026 compared to 2025 due to approved projects like Pike County Battery Energy Storage Solution, Petersburg Energy Center, and grid improvements.

Why AES Indiana is requesting a rate review

Rising operational costs

Like many industries, AES Indiana is facing higher costs for materials, labor, and services due to inflation and market conditions. These increases impact core areas like vegetation management, for example, where prices have risen significantly to trim trees away from our lines.

Our energy transition

Over the last few years, AES Indiana has continued to make generation investments including natural gas, wind, solar, and battery storage, that enables us to continue serving customers with cost-effective and reliable electric service.
