

Powering Central Indiana's future

AES Indiana and Google partner to deliver over \$770 million in customer savings

In April 2026, AES Indiana filed a petition with the Indiana Utility Regulatory Commission (IURC) under Indiana's HEA 1007 statute related to Google's proposed data center in Monrovia, Indiana.

This filing provides a streamlined, responsible pathway for AES Indiana to outline the generation and infrastructure additions needed to serve Google without passing costs to existing customers. In fact, this investment from Google is projected to save customers over \$770 million over the next 15 years.

By the numbers

How the agreement benefits our customers

\$770M Projected customer savings over 15 years

\$1.3B New Indiana energy infrastructure investment

100% Google-funded energy and infrastructure costs

533K AES Indiana customers benefit across Central Indiana
