

## AES Indiana launches **Smart Map** to give customers **increased visibility** into projects

AES Indiana customers now have greater insight into the infrastructure upgrades being made throughout Central Indiana as part of revAMP – a seven-year plan to invest \$1.2 billion in the modernization of the electric grid. Launched in June, the NEW Smart Map provides customers with real-time visualization of revAMP projects and work.

AES Indiana is giving customers more visibility of its projects with real-time information. The Smart Map is an online portal that allows customers the ability to quickly gain information about projects taking place in their community – on their own time, through their own devices.

AES Indiana remains committed to developing new technologies and innovative solutions that allow greater communication with our customers.

Access the Smart Map at [aesindiana.com/revamp](https://aesindiana.com/revamp) to learn more about active and upcoming revAMP projects.

## Customers **receive savings** with elimination of utility receipts tax

While other states are increasing taxes, Indiana's utility receipts tax is being eliminated thanks to action from Indiana lawmakers with the passage of House Enrolled Act 1002. What does that mean for AES Indiana customers? A monthly savings beginning July 1, 2022. After fully implemented, AES Indiana customers will see a monthly reduction of approximately 1.4% - that's nearly \$20 annually for a typical residential customer using 1,000 kWh each month. The elimination of this tax is one of many recent actions taken by the Indiana General Assembly and Governor Holcomb during its 2022 session – and is fully supported by AES Indiana and other utilities. In total, the elimination of Indiana utilities receipts tax will save customers nearly \$250M in avoided taxes.

# Manage the heat and save on energy

AES Indiana urges its customers to stay safe and beat the summer heat while managing energy use with free and easy tips.

## Summer cooling tips:

Use the air conditioning efficiently by setting your thermostat at as high a temperature as comfortably possible in the summer.

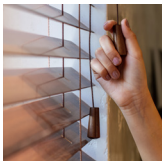

Maintain cooling systems by cleaning the filters in your window air conditioning units and clean or replace filters in central air conditioning systems. Clogged or dirty filters cause air conditioners to use more energy than necessary to keep a home cool.

Turn off the lights and use energy efficient light bulbs that give off less heat in the home.

Reduce air leakage by sealing leaks to keep cool air in the residence.

Close blinds and shades during the warmest part of the day keeps the sun's rays from heating the inside of your home.

## Save energy and money through rebates and discounts

Let AES Indiana help you save energy and reduce energy costs when you take advantage of AES Indiana's Appliance and HVAC rebate programs.

Receive up to **\$600 in rebates** from qualifying ENERGY STAR® certified appliances that help you save energy\* and up to **\$725 in rebates and discounts** on energy-efficient tune-ups, replacements, and other upgrades to help reduce your energy costs and improve your year-round comfort.

Appliance rebates range from \$50 for your washer or dryer up to \$600 for your heat pump water heater.

See more appliance rebates and apply online at [aesindiana.com/rebates](https://aesindiana.com/rebates).

Available HVAC rebates and discounts range from \$25 for an A/C tune-up up to \$400 for a new central A/C.
