**Re:** Indianapolis Power & Light Company's – Harding Street Station -  
Coal Combustion Residual (CCR) Rule Notification

Dear Randy:

As you are aware, the Indianapolis Power & Light Company (IPL) initiated investigative work in 2019 at the Hanson property related to EPA's Coal Combustion Residuals (CCR) Rule in order to characterize the nature and extent (N&E) of potential groundwater impacts associated with IPL's Harding Street Generating Station's ash pond system and to support evaluation of corrective measures to address those groundwater concentrations present above applicable groundwater protection standards. Based on initial N&E sampling results, IPL has determined that groundwater concentrations above applicable groundwater protection standards underlie the Hanson Aggregates property, located at 4200 S Harding St, Indianapolis, Indiana. IPL is providing you with letter which serves as notification pursuant to applicable provisions of the CCR Rule (i.e., 40 CFR 257.95(g)(2)), to Hanson Aggregates related to this matter of an off-site contamination plume.

As discussed during our February 3, 2020 meeting, IPL will continue the N&E investigative work in order to define the extent of the contamination plume in order to support evaluation of corrective measures. IPL appreciates your attention to this matter and ongoing cooperation.

Sincerely,

Mark Holbrook  
Plant Manager, IPL Harding Street
