

Beat the heat with AES Indiana energy efficiency tips

This month, AES Indiana wants to continue providing summer cooling tips to help you stay safe and beat the heat (additional tips were shared in last month's Smarter Together newsletter).

Consider grilling or cooking outside to avoid ovens or stove tops from heating up your kitchen.

Avoid using heat-producing appliances such as clothes dryers during the hotter parts of the day.

Unplug devices or use smart power strips to reduce energy costs by eliminating “phantom” or “standby” electricity from appliances, chargers, and standard power strips, even when not in use.

Clean debris away from outdoor HVAC units and give them a good cleaning to help them operate more efficiently keeping you cool and saving you money.

Please remember to monitor the heat index, drink plenty of water, and avoid working for long periods in the heat of the day.
